

# Clear-Vu Window Services are your foggy window experts

Spring is the time of year many homeowners do a thorough cleaning. Specifically windows. If your windows look dirty even after you've cleaned them, it could indicate seal failure, or what we refer to as "foggy windows."

For the last 21 years, Vern and Lisa Stacey have been the experts to call when your energy efficient windows lose their seals. They have been saving clients hundreds and sometimes thousands of dollars on window replacements by successfully making foggy windows look new again.

"This time of year more and more people ask questions about foggy windows and what it is we do" says owner Vern Stacey. "Foggy windows are best described when condensation, mist or water droplets get trapped between the panes of a thermal unit indicating a ruptured seal in what was once an energy efficient airtight unit, not only can it look unsightly, it can also be an inconvenience, frustration and expense."

Over time all windows will lose their airtight seal and the window will become cloudy or foggy on the inside. Once the moisture or condensation gets trapped inside it is no longer an energy efficient

window and it will eventually cause the window to permanently look foggy or dirty.

At Clear-Vu Window Services they replace the thermal unit and not the entire encasement. "It's a non-invasive process" says owner Vern Stacey, "we remove the thermal unit with the ruptured seal and we replace it with a brand new energy efficient airtight thermal unit. We install it back into its original casing and it's like new again". The process is considerably less expensive

than replacing the entire encasement and it's backed by a 10 year warranty with a turnaround time four to six weeks.

Remember the name Clear-Vu Window Services, if your windows have seen better days and you are tired of looking through an ugly fog.
